PROGRAM OVERVIEW

Databricks is a unified data, analytics, and AI platform built on the Lakehouse architecture that helps organizations to:

- Ingest, process, and analyze massive volumes of data across cloud environments
- Build scalable data engineering, data warehousing and machine learning solutions on a single Lakehouse platform
- Enable collaboration between data engineers, analysts, scientists, and business teams through a unified workspace

Databricks-certified professionals play a critical role in helping organizations modernize their data ecosystems, scale AI initiatives, and drive business outcomes through intelligent data solutions.
